

# Backups and Disaster Recovery

You may think it will never happen to you or your organization, but chances are you will have an unplanned hardware failure. Whether it's through ransomware, a natural disaster, a resentful employee, or a whole host of other causes, you need to have backups in place, so you don't suffer the consequences.

That's where Exact IT Consulting steps in! We're here to help you with all your disaster recovery and back up needs.

## Disaster Readiness Consultation

A disaster recovery strategy allows you to proactively prepare for circumstances that would otherwise lead to data loss and wasted time and productivity. We work with you to create the best possible disaster recovery solution for your business. Each organization has differing needs, but when it comes down to it we look at factors like:

### Server Dependency Level

We look at how mission-critical your data is. Do your servers house data for crucial platforms such as:

- Enterprise Resource Planning (ERP)
- Customer Relationship Management (CRM)
- Warehouse Management System (WMS)

### Cost of Downtime

The number one casualty of data loss is downtime, which can have a hefty effect on your budget and negative consequences for your business.

### Amount of Data

Another major factor in the mix is the amount of data your server holds. If a picture is worth a thousand words, then the same could be said of a PNG. A five-page document is around 100 KB, while a design file might be 100 times as large.

## Customized Disaster Recovery Solutions

After gathering information on a variety of factors, we can get to work executing and implementing your customized backup solution. There's no such thing as a cookie cutter disaster recovery strategy with Exact IT. Our tailored solutions are budget-conscious and scalable. We'll explore any and all options:

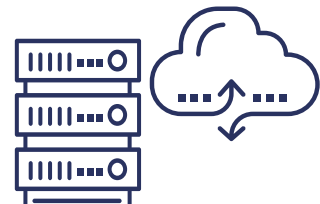

### Local Onsite

### Cloud

### Hybrid

## Document Lifecycle Consultation

Industry-based compliance dictates various information security, sharing, and retention requirements. We can help ensure that you remain compliant throughout the document lifecycle:

1. Creation
2. Storage
3. File Structure
4. Use
5. Archive
6. Deletion

## Microsoft Office 365 and Email Backup Storage

If your organization uses Microsoft Office 365, you may think that Microsoft automatically backs up all your important files—but you'd be wrong! And your desktop is not backed up automatically either. Exact IT helps find the best backup storage solution for wherever your organization's data is, including:

**Microsoft  
Office 365**

**Email  
Inbox**

**Local Servers  
and Workstations**

## About Exact IT

Exact IT Consulting is a premier managed IT services organization that helps businesses make strategic, long-term IT decisions to align technology with business objectives and improve operational efficiency. Serving clients across the Midwest, Exact IT offers a comprehensive suite of proactive and innovative technology solutions, including managed IT, projects, VoIP phone systems, and cloud hosting. The team is known for its superior customer support and exceptional technical consulting.
